

Harpreet Singh Uppal

3D Artist and AI Enthusiast

Mohali, Punjab, India | harpreetsinghuppal26@gmail.com

happysingh3d.com | deadhunk.gumroad.com

Profile

3D artist and AI enthusiast who starts with AI for exploration, development and production, then refines and finishes the work manually. Experience in Maya character animation and rigging, real-time assets, graphic design and video editing. Recent independent work spans games, websites and tools for artists.

Core skills

3D and animation: Maya, Blender, ZBrush, character animation, rigging, UV unwrapping, low-poly asset preparation and Substance Painter PBR texturing.

Real-time and post: Unity, AR/VR/MR asset integration, lighting and lightmap baking; Photoshop, Illustrator, Premiere Pro and After Effects.

AI-led production: AI-assisted creative development, scripting and iteration, followed by manual refinement, testing and delivery review.

Independent projects

Artist tools published on Gumroad

Developed and packaged tools for Blender workflows, including Meshfill, UnwrapCraft and UrbanCraft. Product pages cover modeling, UV work and asset preparation. AI-assisted development is part of the workflow.

Happy Singh portfolio website

Built and maintained a personal website presenting 3D animation, design, video and artist tools, with galleries, project players and links to the public store.

Games and interactive prototypes

Hive Adapt: Unity swarm-shooter and tower-defence prototype with playable Windows builds. Project Frontier: Unity survival foundation with resource collection, building, inventory and save/load. Both use AI-assisted development and manual iteration; they are development projects, not claimed commercial releases.

Browser arcade collection: created and iterated on HTML5 games, menus, controls, gameplay feedback and local best-score handling. Public itch.io work is separate from newer local builds.

Aster Studio Speaker concept

Original Blender product study using AI-assisted scripting, procedural geometry and materials, with Cycles lighting and multiple render views. Saved source scene accompanies the images; this is a portfolio concept.
